## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chandler et al (US5874885) in view of Melanson (US4730102).

Chandler et al discloses a process for producing a connection comprising providing a PTC device including a laminar polymer PTC element (7), a metal foil electrode (3, 5) disposed on a main surface of the PTC element, the metal foil electrode has two metal layers (9-copper) which is the X-th layer and (15-nickel) which is the first layer wherein the X-th layer is between the laminar PTC element and the first layer, a metal lead element (17-nickel), and electrically connecting the metal foil electrode to the lead element (column 8, lines 1-22). Chandler et al does not disclose electrically connecting via laser welding. Melanson discloses electrically connecting the electrode by laser welding (column 1, lines 42-46). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included laser welding as disclosed by Melanson in the process of Chandler et al because, laser welding provides a more efficient connection.
